

Neurosciences Division

We are transforming healthcare for our patients and their families through expert, comprehensive, and innovative services with a personalized approach. Medical and clinical providers look beyond symptoms to find the biological causes of each individual's concerns for determining the most effective treatments. Our team addresses development, behavior, social and emotional well-being, cognitive delay, and various neurological issues. We work with patients of all ages and their families to ensure they receive an optimal evaluation and coordinated follow-up care with compassion, dignity, and respect.

MISSION

To transform the lives of patients through precision medicine, behavior sciences and therapeutic treatments with compassion, dignity and respect.

VISION

To provide hope and achieve positive outcomes for those we serve.

VALUES

Compassion

Collaboration

Integrity

Excellence

Joy

INSURANCE-BASED SERVICES

We are in-network with many insurance providers. Please reference our website for an inclusive list.

NeurAbilities is committed to creating a culturally diverse, inclusive and collaborative community for patients and their families, employees and associates where each person is celebrated and has a sense of equal belonging. Learn more: <https://neurabilities.com/DEI-statement>

Neurosciences

Our Services

Neurology

A neurological evaluation is an important first step in understanding a patient's symptoms. Our physicians assist in determining if there is an underlying neurological, genetic, metabolic, or medical cause for a condition or illness.

Physicians work collaboratively with our multidisciplinary team of experts to explore optimal interventions that may include medication, as well as non-medication approaches such as supplements/vitamins, dietary changes, cognitive behavioral therapies, and applied behavior analysis (ABA).

Our team has extensive experience in providing support for a wide range of conditions, including but not limited to:

- Autism
- Epilepsy
- Mood Disorders
- Anxiety & Depression
- Obsessive-Compulsive Disorder (OCD)
- Post-Traumatic Stress Disorder (PTSD)
- Attention-Deficit/Hyperactivity Disorder (ADHD)

Neuropsychology

A neuropsychological evaluation provides an understanding of how behavior and thinking are influenced by brain functioning, including intellectual abilities, memory, language, and motor skills. This specialized assessment provides a profile of an individual's cognitive strengths and weaknesses, which allows for a better understanding of how symptoms and concerns are caused and expressed. Assessments are customized to meet individual needs.

Our clinicians assist in creating treatment plans, formulating goals for individual education plans (IEP), and monitoring the benefit of these interventions.

HD-EEG (High Density Electroencephalography)

NeurAbilities Healthcare is one of the leading clinical providers of HD-EEG in the nation. HD-EEG is an advanced, non-invasive technology providing real-time functional imaging of brain activity. Preparing for the HD-EEG is a quick and painless process, which helps to reduce anxiety and leads to better data collection. Benefits include:

- Much more data compared to conventional EEG
- Greater accuracy
- No sedation required
- No abrasion of the scalp
- No glues or pastes
- A more comfortable & gentle patient experience

“ It didn't take the NeurAbilities team long to find out that Leo has a form of epilepsy. He has episodes in his brain that make him feel nauseous, panicky, clammy and make his heart race. He doesn't have seizures like you'd imagine those with epilepsy have; he is still conscious, but he feels differently. We are so relieved to know what it is and how to treat it, thanks to everyone at NeurAbilities! ”

– Sue H
