

# King of Prussia Medical

## Diagnostic Centers

Our diagnostic centers are where our team performs autism assessments and other forms of evaluation necessary to gain a better understanding of underlying causes for patient behaviors and symptoms.

Our diagnostic centers are filled with dedicated experts who have extensive experience across several disciplines. Patient and families will have access to:

- A trained team of expert medical providers available to serve patients and families with compassion, dignity, and respect.
- Biopsychosocial assessments and written orders covered under IBHS to assist families in accessing ABA services.
- Neuropsychological evaluations and other assessments that lead to accurate diagnoses and appropriate next steps for treatment and intervention specific to each patient.

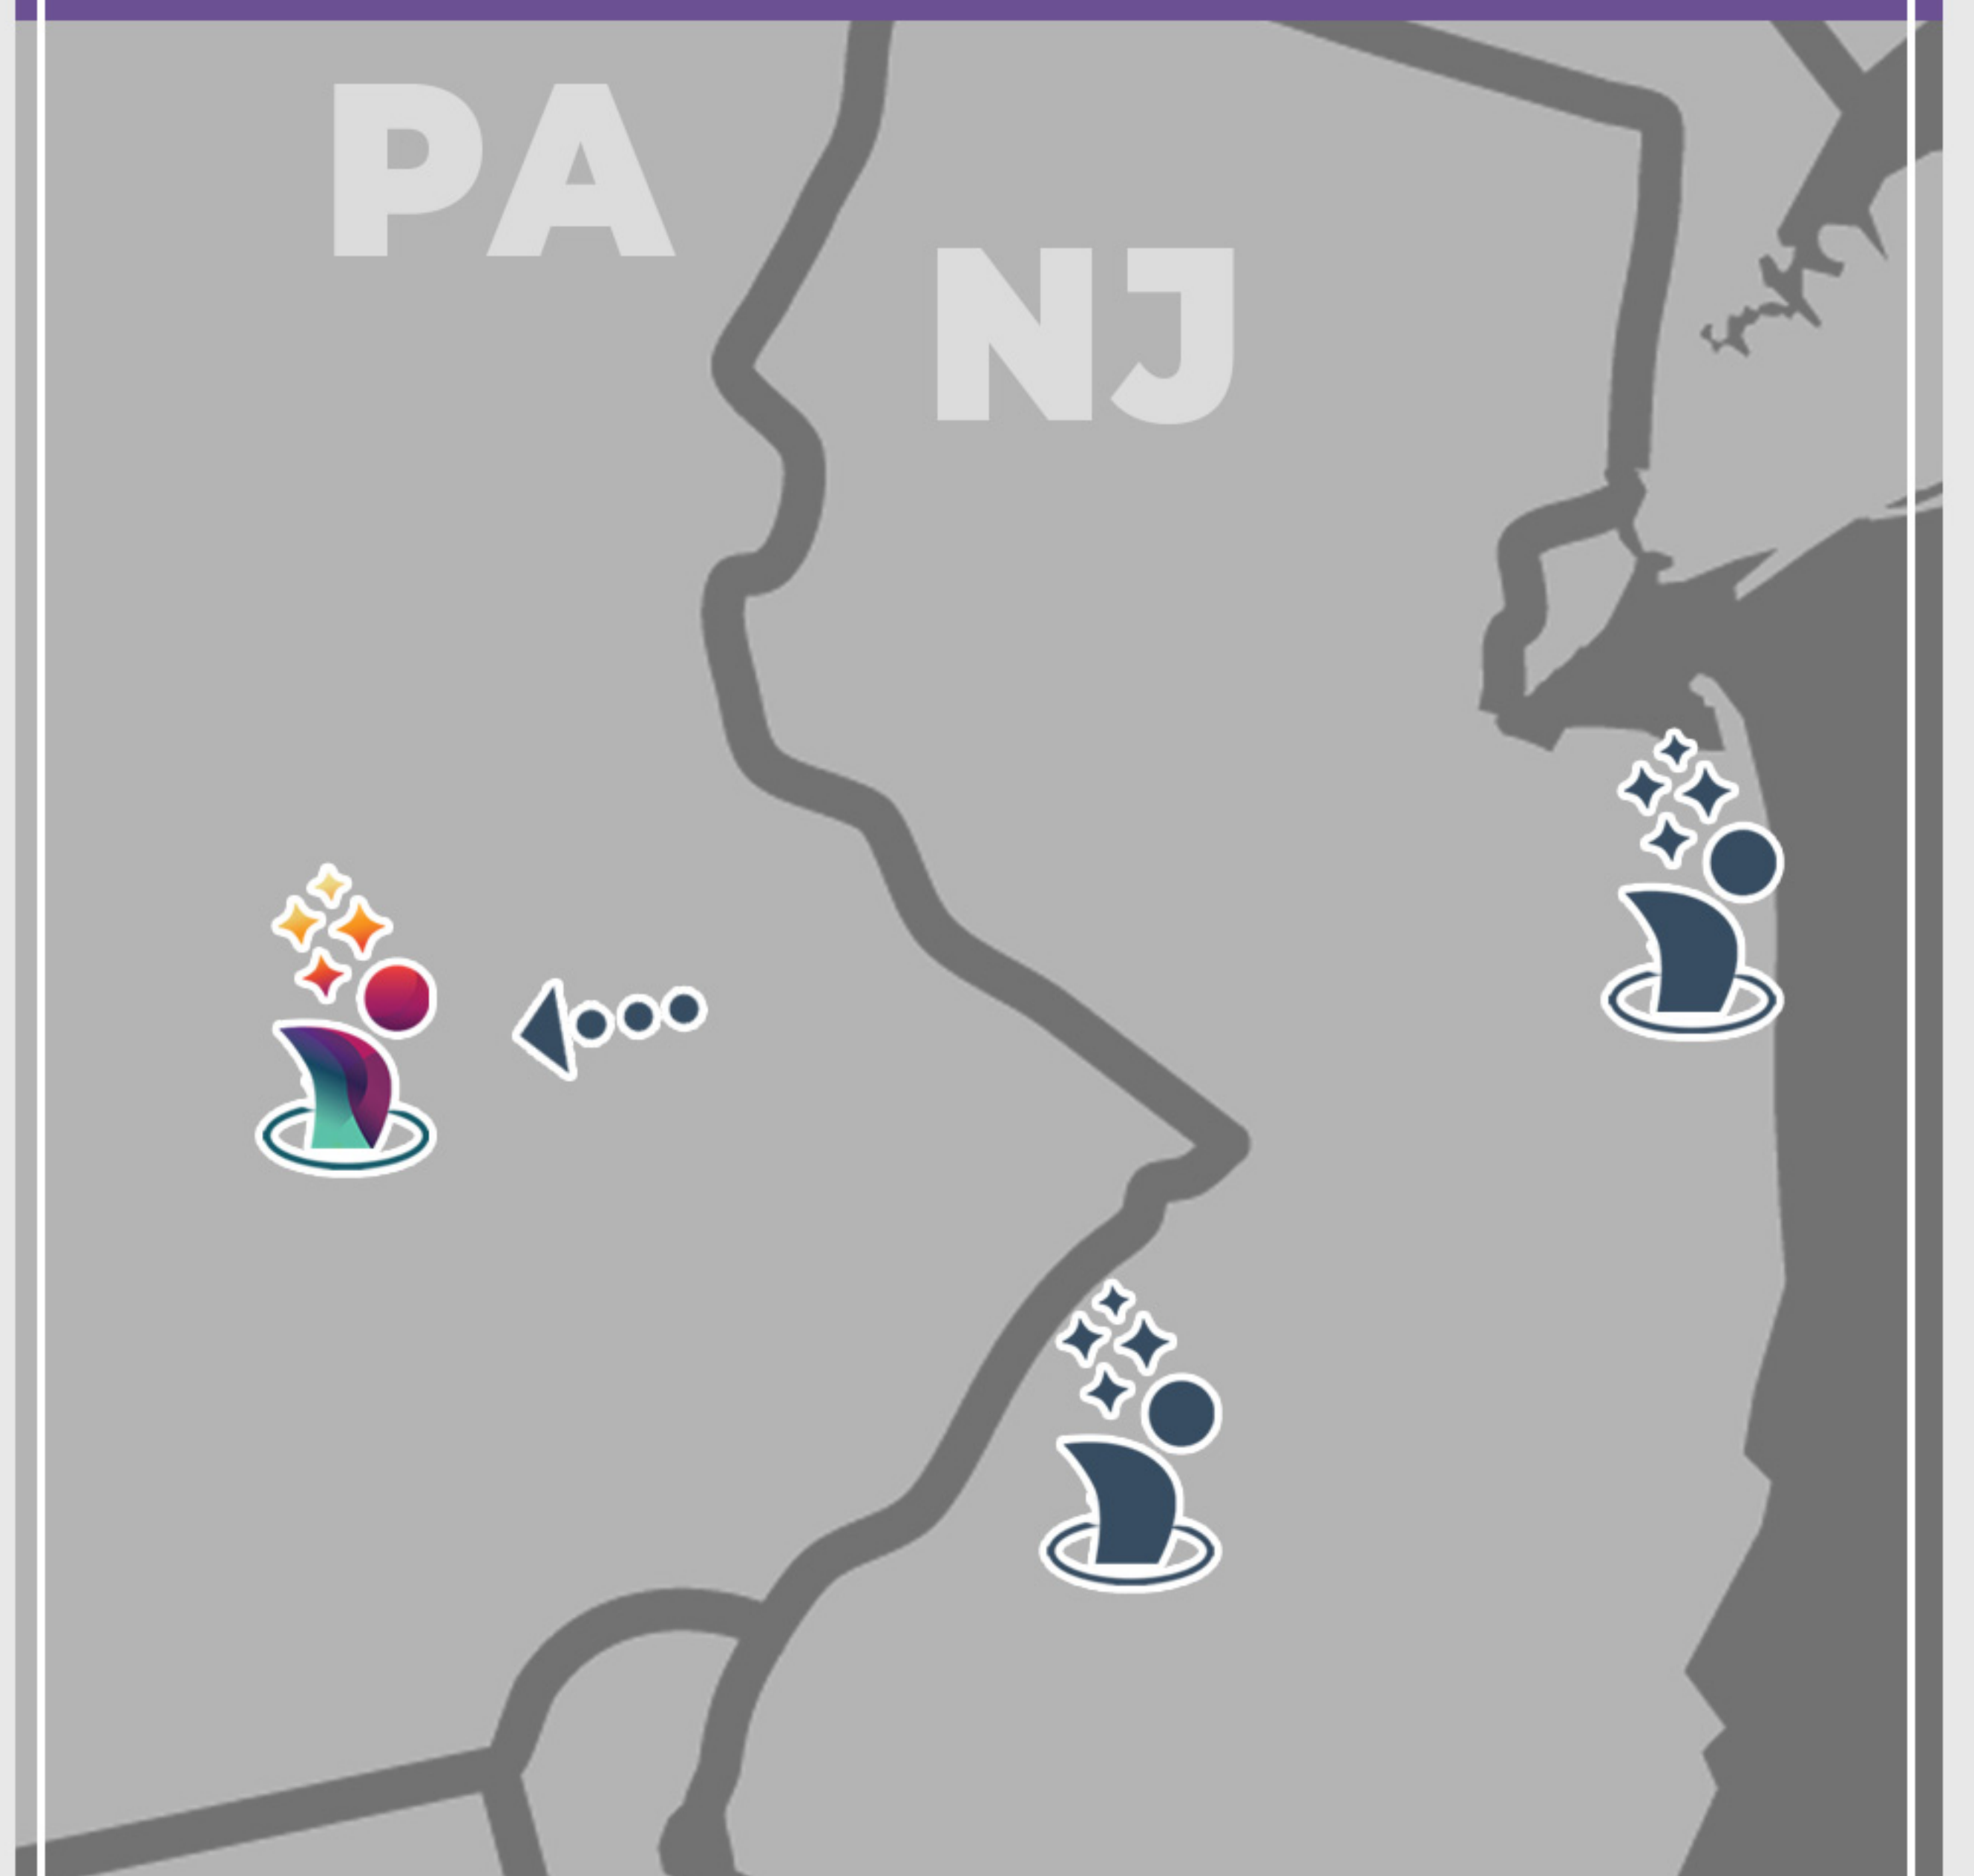

## Inquire About Services

Our knowledgeable and compassionate care coordination team is available to guide families in accessing autism evaluations and other forms of assessment or testing. We are in-network with many commercial payors for medical services. A complete list of providers is available on our website.

Applied Behavior Analysis services are available at our ABA centers in New Jersey and Pennsylvania. Visit our website for the full list of locations.
