Recognizing Small Gains as Big Wins

In our center-based Young Achievers ABA program, we focus on building preschool and elementary school readiness skills for children diagnosed with autism and other behavioral concerns. Our individual and group instruction focuses on social, adaptive, and communication skills to allow your child to succeed once they transition to a school setting with less support. *This program is ideal for children ages 2 to 5 years old, prior to entering 1st grade.*

The Benefits of this ABA Program

Learning Skills

Learning prerequisite skills taught in both 1:1 and peer group settings with a behavior therapist, based on each child's individualized needs.

Circle Time

Circle time and centers that provide an opportunity for children to engage with peers and develop social and communication skills in small group settings.

Caregiver Collaboration

Caregiver support and training that empowers families with tools to help children generalize skills to additional environments.

The Goals of this ABA Program

Prior to beginning the Young Achievers Program, an individualized behavior assessment is conducted to provide insight into the skills and goals each child needs to be successful, such as:

Following a routine

Communication

Functional play skills

Socialization

Adaptive skills

Health & safety
